

Mustang Extreme Environmental Services is one of the leading provider of composite mats for several industries, including pipeline installations. Our mats are lightweight for ease of portability, reducing time and transportation costs. For pipeline projects, these mats provide a strong, stable surface to ensure the safety of construction, and their interlocking design eliminates the separation of the mats providing a safer workspace.

Pipelines are typically laid in some of the most isolated and least developed portions of the country with no infrastructure. Our composite mats create a sturdy base that allows cranes, trucks and other heavy-duty machinery to get to job sites avoiding equipment damage that can be costly and cause project delays. In addition to creating temporary roadways in remote areas, the mats reduce ground pressure by providing weight stabilization. Another benefit to using composite mats for access is that they create fewer disturbances in the land and other ecologically sensitive territories, leaving nature essentially unchanged despite the crew's activity.

SERVING CUSTOMERS NATIONWIDE

Mustang Extreme has several locations across the US strategically positioned to dispatch mats and crews within only a few hours reach. With the ability to transport 40 mats per truckload, trucking costs are dramatically reduced, (almost 1/3 the cost of traditional wood mats), and there is no mess to clean up at the end of your project with virtually no attrition. Our mats overlap and interlock providing a continuous area of ground protection and stabilization, with a weight-bearing capacity of up to 600 psi / 86,400 lbs. per sq. ft. Composite mats are perfect for pipeline projects providing access roads, lay down yards, parking, horizontal directional drill foundations and supporting track and rubber tire heavy equipment.

APPLICATIONS:

- Temporary access roads across flooded or marshy areas.
- Laydown yards for preventing equipment from sinking or getting stuck.
- Parking lot foundation for trailers, portable structures and vehicles.
- Working platforms for horizontal directional drills to protect the land from damages caused by oversized vehicles and load-in equipment including cranes, trucks and forklifts.

Our knowledge, products, commitment to safety and total customer satisfaction enables us to provide dependable access for our customers.

Mustang Extreme Environmental Services composite mats and support services have customers' projects covered.
