THE INDUSTRY LEADER IN GEOSYNTHETIC CONTAINMENT SYSTEMS

ENVIRONMENTAL LINING SOLUTIONS FROM THE ORIGINAL CONTAINMENT COMPANY

PRODUCTS & SERVICES

- Environmental Lining
- Above Ground Storage Tanks
- Secondary Containment
- Spray-in Liner
- Custom Aeration Systems
- Remote Leak Detection and Water Quality Monitoring
- Composite Matting
- Temporary Bridges
- Custom Heater Huts

GEOSYNTHETIC LINING SOLUTIONS

EXPERIENCE BUILT BY THE BILLIONS.

From our humble beginnings over two decades ago in Oklahoma to becoming the largest national containment operation serving all major end markets, Mustang Extreme has built a reputation for unmatched technical expertise and field-proven experience. With a strong emphasis on quality control and precision installation in complex site conditions, our crews are known for their ability to adapt, solve problems, and deliver safe, high-quality results, on time and on budget. Over our 20-year history, we have installed more than 2.0 billion square feet of geosynthetic liner.

MATERIALS INSTALLED:

- 20, 30, 40, 60, 80, and 100 Mil HDPE and LLDPE Geosynthetic Membrane
- Geosynthetic Clay Liner (GCL)
- Geocomposite
- Geosynthetic Textile
- Geonet
- Wind Defender® Ballast Systems
- PVC
- Conductive Liner

APPLICATIONS:

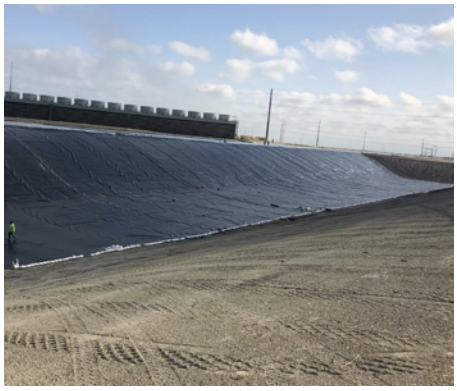

- Produced Water and Freshwater Impoundments
- Wastewater Lagoons
- Solid Waste Management
- Flowback and Produced Water Ponds
- Sediment Control Ponds
- Moisture Barriers
- Soil Remediation Pads
- Landfill Caps
- Floating Covers
- Liner Repairs

WHY CHOOSE MUSTANG:

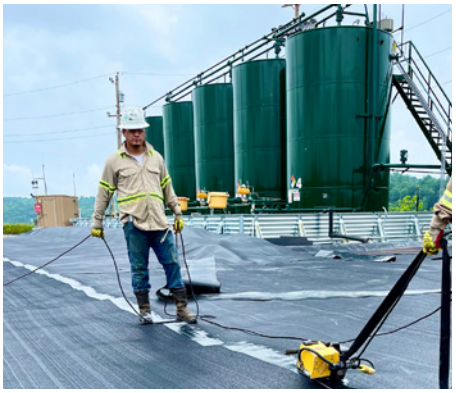

- 20+ Years of Experience
- 2+ Billion SF of Liner Installed
- Rapid Mobilization
- Safety-Driven Culture
- Experienced Project Management
- Stringent QA/QC Processes

Agriculture

Coal Ash

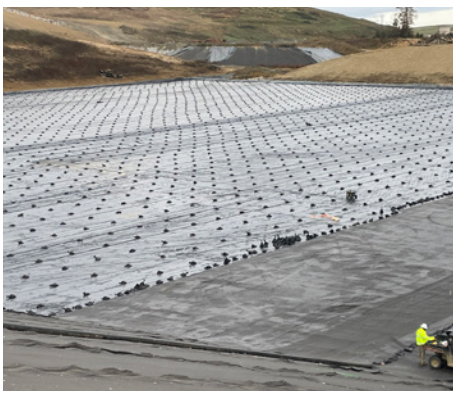

Oil & Gas

Mining

Sediment Ponds

Landfill

ENVIRONMENTAL SERVICES

A FULL SUITE OF CONTAINMENT PRODUCTS AND SERVICES

SECONDARY CONTAINMENT

We offer a range of top-quality secondary containment options to meet the specific requirements of individual operations. Our crews have installed systems in all terrains and ground conditions, ensuring compliance with state regulations. Our systems and installations are quality controlled and quality assured to meet the Occupational Safety and Health Administration (OSHA) standards.

- Steel Wall Systems
- Plastic Modular Systems
- Prefab Liners
- Polyurea Spray Liner
- Drive-over Systems
- Tank Pads

ABOVE GROUND STORAGE TANKS

Our fast-deploy, portable above ground storage tanks help operations get up and running faster, saving time, manpower and money. Traditional water supplies require countless truck trips to meet demand and in-ground systems can take months to complete. Our tanks have a huge storage capacity, relatively small footprint, and can be up and running in a few days. Aeration and remote water monitoring can be added to meet water management requirements and to help improve operational efficiencies. 10,000 BBL to 80,000 BBL capacities available.

SPRAY-IN LINER

Mustang Extreme provides professional spray-in polyurea liner installation services designed to protect containment structures from leaks, corrosion, abrasion, and chemical exposure. Mustang's spray-in liner systems are used across a wide range of applications, including secondary containment around oilfield tanks, as well as industrial, marine, and infrastructure environments where long-term performance and environmental protection are critical.

CUSTOM HEATER HUTS

Protecting sensitive equipment from extreme weather and cold can reduce the risk of costly repairs. Our full-service heater hut installations are customized to each job site with minimal disruption to your operations.

WATER MANAGEMENT SYSTEMS

To assist with cost-effective management of stored water, we offer custom-designed aeration systems and remote water monitoring and leak detection systems. These customizable systems can be installed in any storage application including above ground storage tanks or in-ground ponds.

COMPOSITE MATS

Mustang Extreme maintains a large fleet of heavy-duty composite mats for the construction of stable, safe platforms to support heavy drilling equipment and vehicular traffic. They provide excellent protection of geosynthetic liner systems and add an additional layer of spill containment. They also provide fast-deploy, safe and stable temporary roads over uneven and soft ground conditions.

TEMPORARY BRIDGES

Our engineer-rated temporary bridges provide a fast, cost-effective method for crossing waterways and drainage features without disrupting stream beds or banks, helping projects avoid lengthy permitting delays associated with traditional crossing methods. In many cases, bridge installation can be completed in less than a day.
