# THE ENVIRONMENTAL TRACKOUT CONTROL SOLUTION

## FOREIGN OBJECT DEBRIS SYSTEM (FODS)

An innovative trackout control mat, FODS are designed to remove debris from vehicle tires more effectively than traditional options like rocks, shakers and steel plates. Designed for durability and strength, they are easy to clean, easy to install and remove, and can be easily transported from job site to job site with minimal equipment.

# FODS TRACKOUT CONTROL SYSTEM

## APPLICATIONS:

- Road and Bridge Construction
- Civil and Commercial Construction
- Airports
- Government and Military Facilities
- Oil and Gas Sites
- Renewable Energy Sites
- Telecommunications
- Utilities
- Mining
- Agriculture

## SPECIFICATIONS:

- Dimensions: 12' x 7'; pyramids are 3" tall
- Weight: Approximately 430 lbs
- Color: Yellow
- Material: HMWPE (high molecular weight polyethylene)
- Mats per full semi-truckload: 96
- 100% recyclable
- Manufactured in the U.S.A.

## FODS OFFER SUPERIOR BENEFITS OVER STONE

Able to support weights up to 80 tons, FODS create an instant construction entrance over virtually any type of even or uneven surface including asphalt, concrete, turf, marshy areas, sand, and mud. Zero excavation or remediation is required, helping reduce time and costs of installation and removal.

## FODS VERSUS STONE

|                                                 | FODS | STONE |
|-------------------------------------------------|------|-------|
| Minimal Clogging                                | Yes  | No    |
| Easily Cleaned by Washing or Sweeping           | Yes  | No    |
| Reusable                                        | Yes  | No    |
| Does Not Absorb Chemicals, Oils or Liquids      | Yes  | No    |
| Easily Seen From the Street                     | Yes  | No    |
| Transports Easily and Quickly From Site to Site | Yes  | No    |
| Rapid Deployment                                | Yes  | No    |

## STRICT REGULATORY APPROVAL

FODS is an approved Best Management Practice (BMP) that fully complies with SWPPP, NPDES, and state Department of Transportation (DOT) stormwater regulations.

A standard 35-foot FODS layout provides equal or better tracking control than a traditional 70-foot stone entrance.

## INSTALLATION

A 10-mat FODS layout will cover a standard 12' x 70' entrance on most construction sites. Various jurisdictions require different lengths so this may be less or more depending on where they are used.

The mats can be anchored to the ground and fastened together to improve stability.
